

# Fiberglass vs Concrete Timeline

**Fiberglass:** Installs can happen in 1 week in a perfect scenario - Installers typically allow 2-3 weeks for potential delays such as weather or inspections.

Families will usually be swimming and building memories after week 3. So they are enjoying their pool weeks 4-12 vs a gunite customer has a destroyed yard and crews in their backyard.

**Concrete:** Typical install time frame for gunite is 8-12 weeks average. Many exceed these times because of amount of steps - contractor schedules - inspects - weather delays.

Chemical startup of a gunite pool is 4 weeks and usually passed as responsibility of the home owner. If done wrong it can damage the finish.
